

### Other Interaction Styles

# Interaction styles

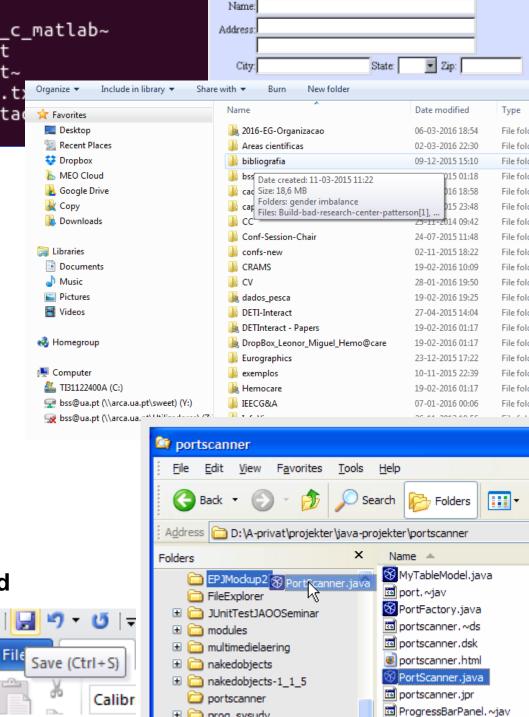

# emails\_32YSM~ instruções\_mex\_c\_matlab~ java-how-to.txt java-how-to.txt~ matlab-install.ty Organize ▼ Inc Notas\_implementa( ★ Favorites notas\_ros.txt~ Recent Places Dropbox

#### A possible classification:

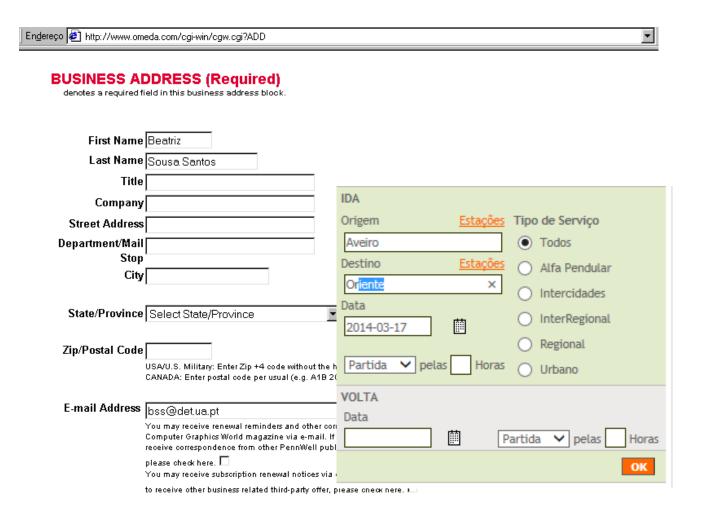

- Menus
- Direct manipulation
- 🕨 Fill-in-forms 🤙
- Function keys
- Question and answer
- Command languages
- Natural languages
- ...

Often two or more styles are used simultaneously;

Why?

#### Fill in forms

 Fill in forms are particularly useful for routine, clerical work or for tasks that require much data entry

 The concept already existed long ago

 Currently they are often used with other styles

#### Main advantages and disadvantages

#### **Advantages (potential)**

- Self-explanatory
- Recognition instead of recall
- Allow many different inputs (unlike menus)
- Give context and guide the user
- New functionality is visible (unlike command languages)

#### **Disadvantages**

- Imply knowledge of valid inputs
- Error prone
- Not very flexible

#### Fill in form design: relevant aspects in design

- Organization and layout
- Titles and fields
- Input formats
- Instructions and help
- Navigation
- Error handling

#### Fill in form design: guidelines

#### Which is preferable?

#### **Example:**

Zip code:

Name:

Country:

Address:

City:

#### **Better:**

Name:

Address:

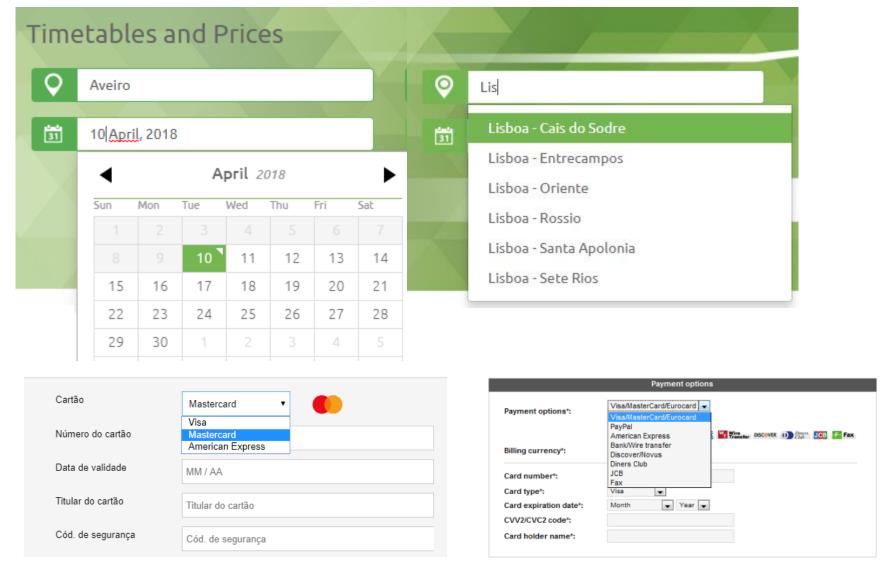

Zip code:

City:

Country:

**Avoid unfamiliar layouts!** 

### Provide a menu when possible inputs are known (combining two interaction styles...)

10

#### Show which fields are mandatoty

.: Audio/Multimédia » Apontadores Multimédia	Mbit.pt > Registo de Clientes	Área Cliente
> Auscultadores/Microfones > Colunas de som > Emissores FM > Leitores de Mp3	Username*	Nome do utilizador:
> Placas de Som > WebCams .: Caixas ATX/Fontes	Password*	Password:
> Barebones > Caixas ATI > Fontes	Password*	OK
.: Câmaras Digitais > Acessórios > Câmaras	Nome*	Registar
> Cartões de Memória .: Captura de TV/Video	Email*	Recuperar Password
⇒ Placas de Edição de Video ⇒ Placas de TV .: CD/DVD	N.º de Contribuinte*	
> Bolsas > Caixas	Morada*	Informação
> Cd/R/RW > DVD/R/RW .: Computadores	Código Postal* .	13 Anos de Experiência, 14 Lojas para o servir!
> Acer > Configurações Mbit	Telefone*	
.: Consumíveis > Epson > HP	Fax	Loja 1 - Porto Torrinha
Tinteiros     Reciclados/Compatíveis     Descontinuados/Ocasião	Telemčvel	Pesquisa
➤ Descontinuados/Ocasião .: Discos	Data de Nascimento* 1 💌 Jan 💌 1995 🛩	[OK]
Rígidos/Controladoras/Caixas para Disco > Acessórios p/ Disco	Register	l lok
> Caixas para Disco > Controladoras > Discos externos	1.00.31.00.00	Top Vendas
> Discos IDE > Discos p/ Portáteis > Discos SCSI	• • • voltar	Top (chass

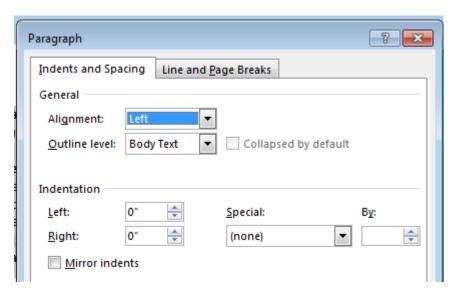

Usually indicated by \*

It should be possible for the user to choose the type of input (it prevents errors) or adapt to the context

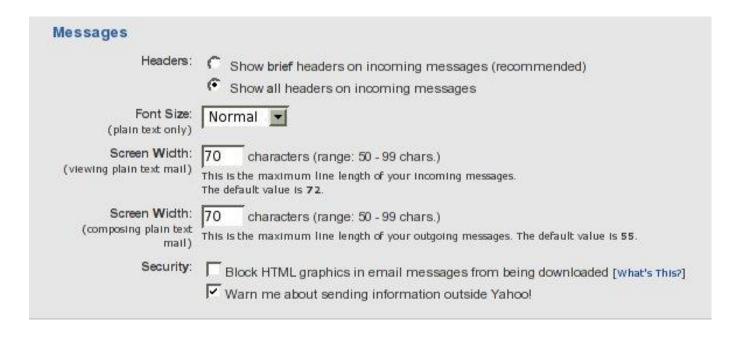

Portuguese version (cm):

English version (inches):

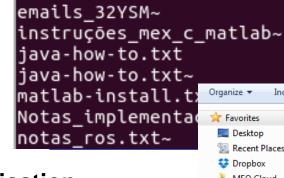

#### Instructions to fill the fields should be clear as well as messages

#### This message did not help me much...

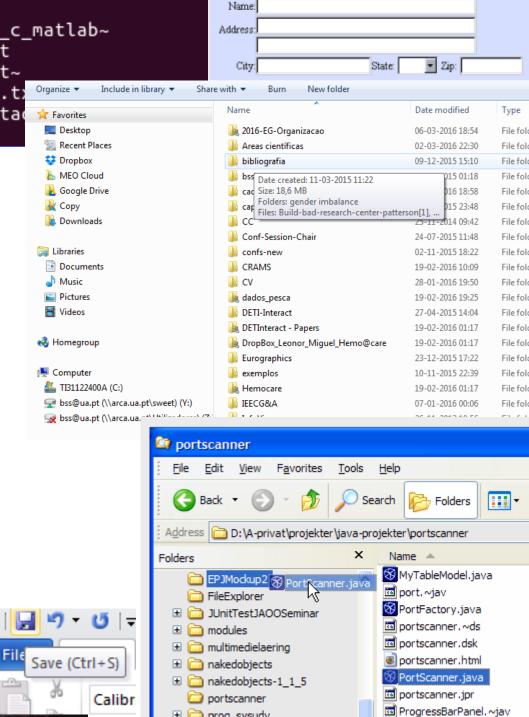

# Interaction styles

#### A possible classification:

- Menus
- Direct manipulation
- Fill-in-forms
- Function keys
- Question and answer
- Command languages
- Natural languages

Often two or more styles are used simultaneously

#### Function keys

- Two types:
  - Hard Keys Always invoke the same functionality (as the keys of a calculator and some specific keys of PCs)
  - Soft Keys invoke different functionality according the context of use (as the keys (F1...Fn) and the generic keys of an Automated Telling Machine, e.g. Multibanco)
- PCs have 12 generic Keys (F1 a F12) and a few other specific keys

Keys that invoke specific functionality in PCs and MACs

#### Soft Keys

Soft function keys don't have abbreviations of default actions printed on/besides them, they may have "F-number" designations.

Function keys (generic)

https://en.wikipedia.org/wiki/Function\_key

#### Main advantages and disadvantages

#### **Advantages (potential)**

- Self-explanatory
- Recognition instead of recall
- Easy to use
- Flexible
- Require little or no screen real estate

#### **Disadvantages**

- Limited number of keys
- Hardware expansions are expensive

#### Function keys design: guidelines

Provide enough keys to call the functionality

But no too many as not to make it difficult to learn

- free space
- different size, color and shape to different groups
- category groups
- clear and distinctive names

TV remote control

Multi-media remote control keyboard

Industrial keyboard

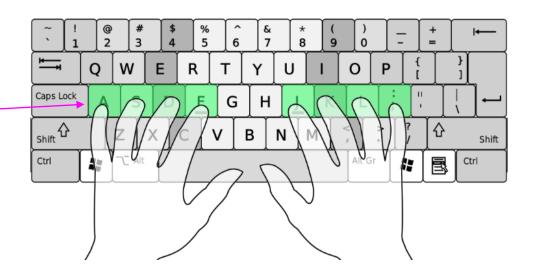

ATM keyboard

Shop system keyboard

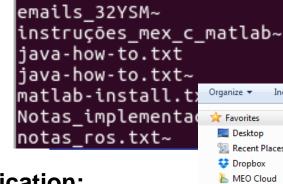

Frequently used keys should be near the "home row"

Keys with serious consequences should not be easy to activate (e.g. ctrl Alt Del)

# Interaction styles

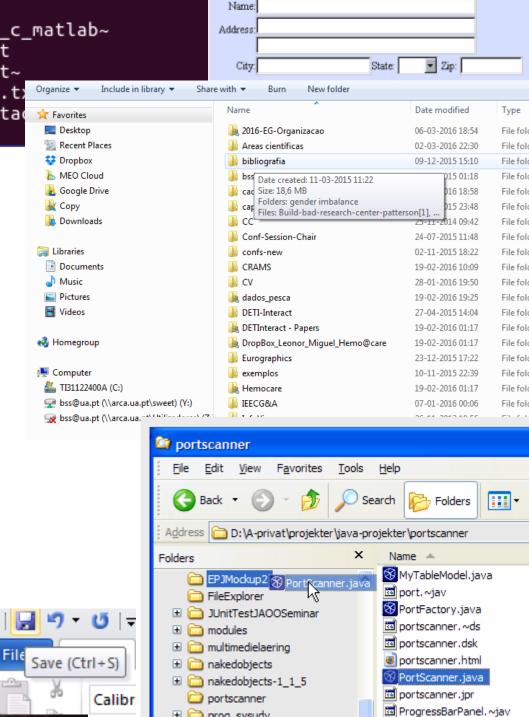

#### A possible classification:

- Menus
- Direct manipulation
- Fill-in-forms
- Function keys
- Question and answer
- Command languages
- Natural languages

. . .

Often two or more styles are used simultaneously

#### Command languages

```
cd /tmp
echo "line 1
line 2
line 4" > tmp1$$
echo "line 2
line 3" > tmp2$$
diff tmp1$$ tmp2$$
rm tmp1$$ tmp2$$
```

```
guru99@VirtualBox:~$ history
    1 cat > sample
   2 cat sample
    3 cat sample ^a
    4 cat sample a
    5 cat sample | grep a
    6 cat sample | grep ^a
    7 useradd home
   8 useradd mycomputer
     sudo useradd mycomputer
   10 sudo adduser MyLinux
   11 sudo adduser mylinux
   12 vi scriptsample.sh
```

Command languages shall also be designed as to be as usable as possible

#### Basic Goals of Language Design

- Precision
- Compactness
- Ease in writing and reading
- Speed in learning
- Simplicity to reduce errors
- Ease of retention over time

#### Usability Questions concerning a command language

- Does the language support necessary functions?
- Is it fast to enter a command?
- Is it easy to recognize what the command might do?
- Is it easy to recall a command?
- Are there few errors when using the language?

#### Main advantages and disadvantages

#### **Advantages (potential)**

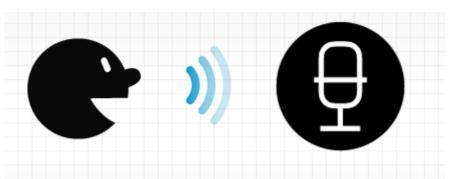

- Powerful
- Flexible
- Efficient
- Do not take much screen real estate

#### **Disadvantages**

- Difficult to learn
- Not self-explainable
- Error prone
- Improvements are not visible

#### Note that:

Command languages may be used not only through text but also via voice But they must be very simple ... e.g.

While driving a car to control the media, the phone or navigate

Interaction style: command language interaction devices: speech recognition/synthesis

#### Relevant issues in Command Language design

- Semantics
- Syntax
- Lexicon
- Interaction

#### Use a coherent syntaxe

#### Use a natural and easy to remember action-object grammar

VolB!FileA!D\$\$
FileA!VolB!ER\$L!:KO:!\*\$\$

Uncoherent syntax and unfamiliar commands

search filea volb.

open filea volb.

list all lines with "KO".

or

s filea volb. o filea volb. lal "KO".

Command abbreviations should be simple and coherent Easy to remember (not easy to recognize as for function keys)

	Abbreviations		
Name	Poor:	Improved	
Move forward	MovF	MovF	
Move backward	Mvb	MovB	
Insert	I	Ins	
Delete	Dl	Del	
Replace	Repl	Rep	
Search	Srch	Sea	
Delete	X	Del	
Send	Sn	Sen	
Print	Prt	Pri	
Search	Srch	Sea	
Send	Sn	Sen	
Find	Fi	Fin	
Choose	Ch	Cho	

#### Allow the following interaction features:

- Defaults
- Command edition
- Intelligent interpretation
- Type-ahead
- Feedback
- Help and documentation
- Make the language "user tailorable"

Example of intelligent interpretation: "delate": did you mean "delete"? Y or N

#### Example of a (complex) command with defaults

#### Is - Linux man page

#### Name

Is - list directory contents

#### **Synopsis**

Is [OPTION]... [FILE]...

#### Description

List information about the FILEs (the current directory by default). Sort entries alphabetically if none of **-cftuvSUX** nor **--sort**.

Mandatory arguments to long options are mandatory for short options too.

- -a, --all
  - do not ignore entries starting with .
- -A, --almost-all

do not list implied . and ..

--author

with -I, print the author of each file

- -b, --escape
  - print octal escapes for nongraphic characters

### You don't need to use all arguments; there are default values

-d, --directory

list directory entries instead of contents, and do not dereference symbo

-D, --dired

generate output designed for Emacs' dired mode

-f

do not sort, enable -aU, disable -ls --color

-F, --classify

append indicator (one of \*/=>@|) to entries

--file-type

likewise, except do not append '\*'

--format=WORD

across -x, commas -m, horizontal -x, long -I, single-column -1, verbose

--full-time

like -I --time-style=full-iso

-g

like -I, but do not list owner

--group-directories-first

group directories before files.

augment with a --sort option, but any

use of --sort=none (-U) disables grouping

-G, --no-group

in a long listing, don't print group names

-h. --human-readable

with -I, print sizes in human readable format (e.g., 1K 234M 2G)

--si

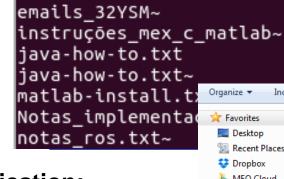

likewise, but use powers of 1000 not 1024

-H, --dereference-command-line

follow symbolic links listed on the command line

Etc.., etc., etc.

# Interaction styles

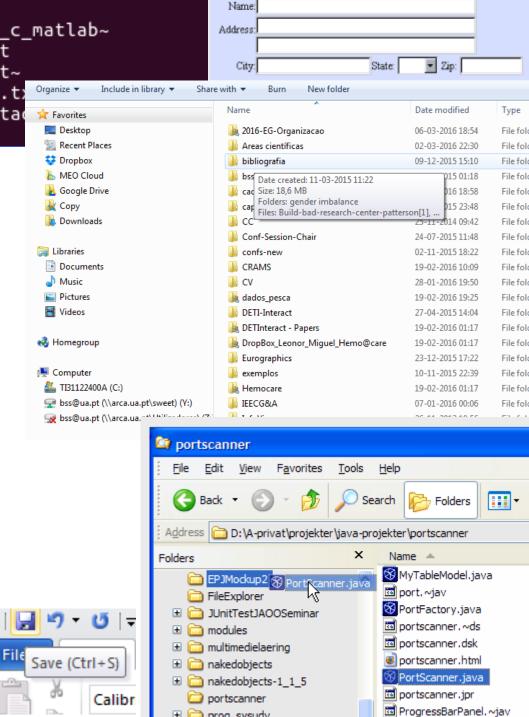

#### A possible classification:

- Menus
- Direct manipulation
- Fill-in-forms
- Function keys
- Question and answer
- Command languages
- Natural languages

Often two or more styles are used simultaneously

#### Natural language

- Communication between humans and computers through natural language involves:
  - recognition
  - generation
- Natural language processing (NLP) has been evolving a lot ...

#### Note:

natural language as a interaction style and voice interaction are different things!

#### Conversational User interfaces (CUIs)

Based on natural language

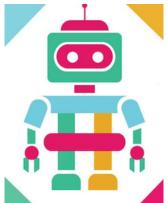

Think of the potential advantages and disadvantages of CUIs:

Chatbots

https://www.nngroup.com/articles/chatbots/

What doesn't fit the principles of Conversational UI well? Products where the use case involves a technical user who wants fine grain control over the interface, .... e.g. CAD software, or a programming IDE...."

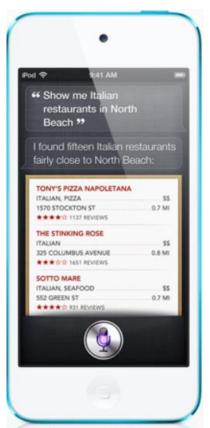

### **Current examples of Natural language interaction** (mostly via voice)

Mobile phone personal assistants:

- Siri for Apple's iOS
- Google assistant

## Another example (natural language via voice)

Interaction style: natural language;

interaction devices: speech recognition/synthesis

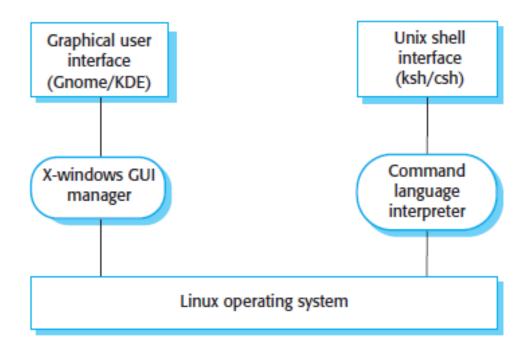

https://www.nngroup.com/articles/voice-interaction-ux/

#### Main advantages and disadvantages of interaction styles

Interaction style	Main advantages	Main disadvantages	Application examples
Direct manipulation	Fast and intuitive interaction Easy to learn	May be hard to implement Only suitable where there is a visual metaphor for tasks and objects	Video games CAD systems
Menu selection	Avoids user error Little typing required	Slow for experienced users Can become complex if many menu options	Most general-purpose systems
Form fill-in	Simple data entry Easy to learn Checkable	Takes up a lot of screen space Causes problems where user options do not match the form fields	Stock control Personal loan processing
Command language	Powerful and flexible	Hard to learn Poor error management	Operating systems Command and control systems
Natural language	Accessible to casual users Easily extended	Requires more typing Natural language understanding systems are unreliable	Information retrieval systems

#### Multiple user interfaces example

(Sommerville, 2010, chap.29)

#### 3D User Interfaces

- User interfaces involving 3D interaction (i.e. interaction in which the user's tasks are performed directly in a 3D spatial context).
- Are more and more used:
  - Virtual and augmented reality
  - 3D workspaces
  - Data Visualization ...

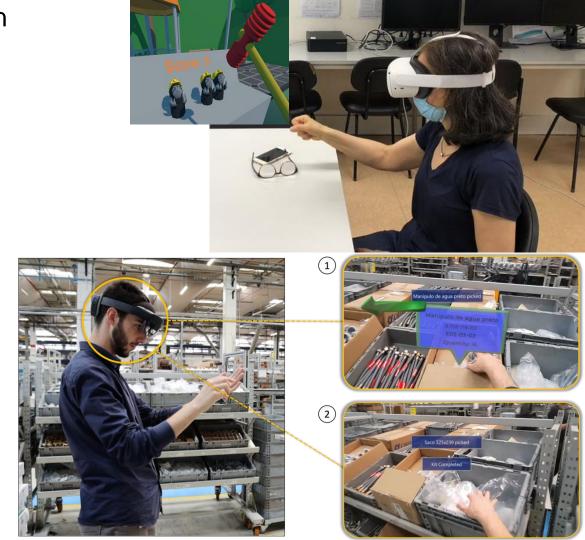

- But have some issues:
  - User disorientation, ...(in the real world we have more information)

#### Applications of virtual and augmented reality (eXtended Reality):

- Training and simulation
- Assistance in tasks
- Project review
- Therapy
- Experiments
- Entertainment
